

# BOREHOLE GEOPHYSICAL LOG

English/Metric units  M

<b>SiteID (C1)</b> 420031091443301		<b>Station name (C12)</b> 2015USGS GPW1		<b>Other ID</b> GX-1	
<b>County</b> Linn			<b>State</b> Iowa		<b>Log date</b> 06/20/17
<b>Owner</b> USGS				<b>Project</b> Cedar Rapids Alluvial Aquifer Study	
<b>Location description</b> Woods within Seminole Valley Park; active construction ongoing					
<b>Latitude</b> 42.00877°		<b>Longitude</b> -091.74269°		<b>Lat/Long datum</b> NAD83	
<b>Altitude LMP</b> 244		<b>Altitude datum</b> NGVD88		<b>Log measurement point (LMP)</b> Top of Casing (TOC)	
<b>Height LMP</b> 0.9 m above (+) LS			<b>Description of LMP</b> Top of steel casing; 0.022 m above inner 2" PVC casing		
<b>Borehole depth</b> 19.49 TOC		<b>Borehole diameter</b> Unknown		<b>Casing bottom</b> 19.19 TOC	
<b>Casing diameter</b> 5.08		<b>Casing type</b> PVC		<b>Source of data</b> USGS Iowa WSC and OGW BG	
<b>Logging unit</b> USGS OGW BG		<b>Log orientation</b> MN		<b>Magnetic declination</b> 0.72° W	
<b>Recorded by</b> KLCP/SNP			<b>Observed by</b> LG/ EB/JW		
<b>Software non-ASCII logs</b> WellCAD 5.1			<b>Type of log</b> ZZ-Composite		
<b>Fluid type</b> Water		<b>Fluid depth below LMP</b> 2.11		<b>at time</b> 8:25	
<b>Hydrologic conditions</b> Flood Plain of the Cedar River; scattered thunderstorms in during week of logging					
<b>Tool manufacturer and model, tool serial number, log date and time, logging direction and speed, depth error after logging, log parameter(s) and date(s) of calibration check</b>					
<b>Tool run 1</b> Mount Sopris Instruments (MSI), 2PIA-1000, SN 2377, 06/20/2017 at 09:12 logging down and up at ~4.6 m/min, round trip error of 0 ft, measuring bulk electrical conductivity, calibrated in field on date of log					
<b>Tool run 2</b> MSI, 2PGA, SN2339, 06/20/2017 at 09:45, logging down and up at ~4.6 m/min, measuring natural gamma, calibrated at factory					
<b>Tool run 3</b> Vista Clara (VC) NMR JP175, SN001, 6/20/2017 at 10:00, logging down collecting stationary measurements in 0.5 m increments, round trip error of 0.02 m, measuring total, mobile and bound water content, calibrated May 2016 at OGW-BG					
<b>Remarks</b>					
<p>For each depth, the decay data are shown as total-, mobile-, capillary-, clay-, and bound- fractions of water content (where bound = clay + capillary), Sum of Echoes (SOE), and Mean Log T2 (MLT2). The T2 "free water cut-off" was 33 ms. All water content (WC) greater than the free water cut off is mobile, and all WC less than the free water cut-off is immobile or bound. A T2 cut-off for clay was set at 3 ms. Using this clay cut off, the bound water can be subdivided into clay-bound and capillary bound. Noise indicates the fit of the multiexponential decay curve to the data.</p> <p>Hydraulic conductivity( K) was estimated at each depth using two empirical relations, including the Schlumberger-Doll research (SDR) and the Sum of Echoes (SOE). The default parameters for these equations were used. These are derivative estimates that can be updated if better site specific parameters are determined.</p>
